Juniper firewall sizing guide

Juniper SRX is ranked 10th in firewalls with 18 reviews, while Sophos XG is ranked 7th in firewalls with 29 reviews. Juniper SRX is rated 7.6, while Sophos XG is rated 7.8. The best reviewer of Juniper SRX writes This best in the class Next-Gen firewall is elegant in its ease of use and architecture. On the other hand, writes the top reviewer of Sophos XG Offers a high level of visibility of what is happening on your network or on your client computers. Juniper SRX is most compared to Fortinet FortiGate, Palo Alto Networks WildFire, pfSense, Meraki MX and Sophos UTM, while Sophos XG is most compared to Fortinet FortiGate, pfSense, Sophos UTM, WatchGuard Firebox and OPNsense. See our Juniper SRX vs. Sophos XG report. See our list of the best firewall providers. We monitor all firewalls reviews to prevent fake reviews and keep review quality high. We do not post reviews of the company's employees or direct competitors. We validate each review for authenticity via cross-reference with LinkedIn, and personal follow-up with the reviewer when necessary. Fortinet Sizing Guide 2018-10-25firewalladmin Download our free firewall provider report based on nearly 500 real user experiences. Cisco and Juniper Networks both offer industry-leading next-generation firewalls (NGFWs). Both firewalls provide important features to meet your company's security needs, and both created eSecurity Planet's list of leading NGFW providers. Yet there are significant strengths and weaknesses for each victim. The following is a look at the features of each solution, along with a look at their main differentiators. The bottom line Both Cisco and Juniper receive enthusiastic responses from customers and industry analysts. Cisco's support network consistently gets high ratings, and the products are especially suitable for companies seeking a wide range of security services that integrate with the firewall. Juniper users praise the solution's simple configuration and rich interface, and the company is a good shortlist candidate for companies seeking high throughput and advanced routing support at a low cost. Nevertheless, NSS Labs testing raised concerns about the cost-effectiveness of both solutions. The company ranks both products with a higher total cost of ownership (TCO) and lower safety efficiency than some competitors, and could not rank Juniper's products at all in its latest ranking. Cisco Product Highlights Overview: Cisco Firepower NGFWs are designed to detect and reduce attacks with deep visibility and advanced security features, while maintaining optimal network performance and uptime. Key differentiators lie in threat intelligence, visibility, and advanced security features. The company's NGFWs are available as hardware devices and as virtual devices for cloud deployments. Recent developments: Recent updates to Cisco's Firepower Device Manager decryption in encrypted traffic software. A new Firepower Migration Tool has also been introduced to help older ASA firewall customers upgrade to a new NGFW. Analysts' take: Gartner says Cisco is a good shortlist candidate for most enterprise use cases, especially when companies seek to deploy a wide range of security services that interact with the firewall. Customers consistently rate the Cisco support network as excellent, citing it as a reason for loyalty to Cisco's security products. Still, many customers cite complex and confusing licensing as a negative, and some express frustration at the complexity of having to use Cisco Security Manager for older firewalls and the Firepower Management Center for newer ones. See our in-depth look at Cisco's Firepower NGFWs. Juniper Product Highlights Overview: Juniper Network's SRX series NGFWs combines high-performance security with integrated application security services, intrusion protection, and advanced threat detection for organizations of all sizes, including enterprise data center, campus and branch, service infrastructure provider, and cloud deployments. In addition to the SRX hardware, Juniper offers virtual firewall for vSRX and cSRX for containerized environments. The latest development: Juniper recently introduced the SRX4600 NGFW, which is optimized for private and hybrid cloud deployments and integrated with the company's Junos Space Security Director. Juniper's SRX NGFWs now also flow directly into the Advanced Threat Protection (ATP) device, enabling the aggregation and correlation of security incidents from Juniper and third-party sources to a consolidated timeline view of all threats in the network. Analysts' take: Gartner says Juniper is a good shortlist candidate for companies seeking high throughput at a low price, along with the ability of the firewall to support advanced routing scenarios. Customers praise SRX's simple configuration and rich interfaces, often citing them as primary reasons for choice and continued use. Still, Gartner customers say Juniper lags behind its major competitors in releasing new security features, and it's been late on the market compared to competitors in areas like public cloud support and VMware NSX integration (although both were recently announced). See our in-depth look at Juniper Network's SRX series NGFWs. NGFW Product Rankings Here are eSecurity Planet's ratings of each solution's most important features. Safety performance: NSS Labs' 2018 test results are incomplete in terms of these products – the company failed to measure the effectiveness of Juniper's NGFW products, while Cisco Firepower 4120 received a 71.8 percent safety efficiency rating, mainly due to not blocking three of the 190 evasion techniques tested. In NSS 2017 tests, the Cisco Firepower 4110 received a security efficiency rating of 95.5 percent, while the Juniper SRX 4200 was rated at 37.8 percent, due to the lack of protection of RPC fragmentation, HTML obfuscation, and HTTP evasion techniques. Performance: Similarly, while Cisco was rated by NSS Labs at 5291 Mbps and Juniper was not classified in NSS' 2018 testing, NSS 2017 tests rated Cisco Firepower 4120 at 2495 Mbps and Juniper SRX 4200 to 1955 Mbps. Value: NSS Labs' 2018 testing rated Cisco's total cost of ownership (TCO) at \$28 per rated protected Mbps, and could not rank Juniper. In its 2017 testing, NSS rated Cisco's TCO per protected Mbps at \$21, and Juniper at \$105. Implementation and management: Juniper customers cite SRX's simple configuration and rich interfaces as primary reasons to choose and continue to use the product, and several Cisco users similarly mention the user interface as a key strength. Still, some Cisco customers express frustration at having to use Cisco Security Manager to manage older models and the Firepower Management Center for newer ones, and customers and partners cite Cisco's complex and confusing licensing as a significant negative. Support: While customers from both companies provide positive reviews for vendor support, Gartner reports that Cisco's support network is so strong that it is often mentioned as an important justification for loyalty to Cisco's security products. Cloud features: Both solutions offer virtual appliances and a variety of cloud capabilities. Juniper's container-focused cSRX firewall is a unique offer. Read more reviews written by users of Juniper Networks SRX and Cisco Firepower NGFWs. Deployment Cisco NGFWs are available as hardware appliances, with the Firepower Defense Manager on-box solution or firepower management center for centralized management. Virtual and public cloud solutions are also available with Firepower NGFW Virtual (NGFWV). Juniper's NGFWs are available in a wide range of options, from all-in-one, integrated physical and virtual security network devices (SRX, vSRX and cSRX) to highly scalable, chassis-based data center solutions. Pricing Structure Cisco's firewalls start at under \$1,000, with prices as low as \$35 per month with Cisco EasyPay leasing. The Firepower 4120 tested by NSS sells for about \$100,000. Juniper's lower-end appliances start around \$300, while the high-end SRX 5800 stars around \$60,000. The company offers a 60-day free trial of its virtual vSRX virtual firewall solution. Other NGFW product comparisons Fortinet FortiGate is ranked first in firewalls with 76 reviews while Juniper SRX is ranked 10th in firewalls with 18 reviews. Fortinet FortiGate is rated 8.6, while Juniper SRX is rated 7.6. The top reviewer of Fortinet FortiGate writes Stable, easy to set up, and offers good returns. On the other hand, writes the top reviewer of Juniper SRX This best in the class Next-Gen firewall is elegant in its ease of use and architecture. Fortinet FortiGate is most compared to Meraki MX, pfSense, Sophos UTM, Cisco Firepower NGFW Firewall Check Point NGFW, while Juniper SRX is most compared to Palo Alto Networks WildFire, pfSense, pfSense, MX, Cisco Firepower NGFW Firewall and Sophos XG. See our Fortinet FortiGate vs. Juniper SRX report. See our list of the best firewall providers. We monitor all firewalls reviews to prevent fake reviews and keep review quality high. We do not post reviews of the company's employees or direct competitors. We validate each review for authenticity via cross-reference with LinkedIn, and personal follow-up with the reviewer when necessary. Necessary.
